SYNTHETIC GRASS FOR LANDSCAPING

www.greenplanetgrass.com.au

AUSTRALIAN MADE

WORLD BOWLS

SPORTS & PLAY
INDUSTRY ASSOCIATION LIMITED

Established in 2008, Green Planet Grass has a wealth of experience providing high-quality synthetic lawn & grass systems for Residential, Commercial & Sporting applications.

Synthetic grass is becoming a popular option for both residential and commercial landscaping. It's a perfect solution for shady and hard to access areas where natural lawn is often difficult to grow and maintain. Water costs and restrictions are putting more pressure on businesses and households to cut down on water usage. Artificial lawn is an ideal way to do this but still have a lush, green environment.

At Green Planet Grass we provide low maintenance, hardwearing & attractive options for various surfaces. Synthetic grass can be installed over concrete, bitumen, brick-paving as well as over natural ground and is suitable for both interior & exterior use.

All our grasses are manufactured in Australia, are of the highest quality & standard and have the most realistic appearance available to complement & enhance existing or proposed gardens. We have a selection of lawns to choose from as well as a range of installation options to suit individual tastes & needs.

All our landscaping grasses are child and animal friendly (we have special installation systems to suit homes with pets). For residential clients with sporting inclinations, we can build putting greens and various other activity areas for the whole family to enjoy. This is a popular way to utilise areas that otherwise are a no-go zone.

When installed professionally, artificial grass provides a level, secure & stable footing, reducing the risk of tripping & falling – particularly beneficial for the elderly and people with disabilities.

All of our synthetic lawns are Australian made to Australian & New Zealand safety standards & are manufactured to Quality Assured Standards (ISO 9002:2008). They are heavy metal free & contain no dangerous toxins. All GPG grasses are fire retardant, won't shrink and are manufactured with the highest level of UV protection to minimise the risk of fading.

An example of uses & applications includes the following:

Residential

- Lawns & verges
- Balconies & Patios
- Home Putting Greens & other sporting & activity areas

Commercial

- Business Premises – verges & lawns
- Resorts & Caravan Parks
- Hotels, Restaurants, Breweries & Wineries (indoor & outdoor)
- Hospitals & other public buildings
- Aged Care Facilities
- Schools
- Child Care Facilities
- Sports Venues
