

MELOS STONE

Melos Stone is designed as a bond surface and unlike gravel, it always stays in place. It is superbly suited for designing paths, gardens and terraces. Also perfect for the hospitality industry: beer gardens are enhanced – barrier free porous design, sure-footedness and consistent appearance are created for the highest demands.

Granules
for gardens and paths areas

Granules Highlights

Melos Stone:
perfect aesthetics
and non-slip finish

- ✓ Easy to clean
- ✓ Barrier free porous
- ✓ Optimal dewatering
- ✓ Weather-resistant
- ✓ Durable

Strong floor coverings for many creative possibilities

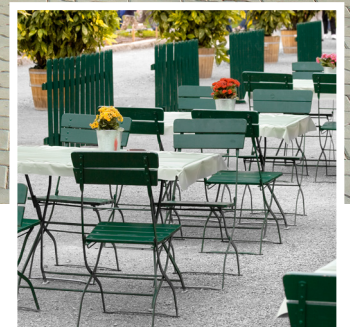

Stone surfaces are readily used for path areas, on terraces and in garden design. Usually, gravel and similar materials are processed in an unbonded manner – they lie loosely on the underground. With Melos Stone, there is more: attain visually perfect results with maximum sure-footedness and barrier free porous design.

Traditional stone surfaces cause obstacles, most notably in the hospitality industry, in public and semi-public spaces: waiters slip, pushchairs are hard to push and wheelchairs only move with the exertion of significant force.

A hardened surface made of Melos stone granules provides sure-footedness and wheels can grip.

Processors take the pre-defined “stone blend” colour as a basis. It consists of two different grey tones.

The best: considerably less material is used for a Melos stone surface in comparison to a stone surface with a similar installation depth.

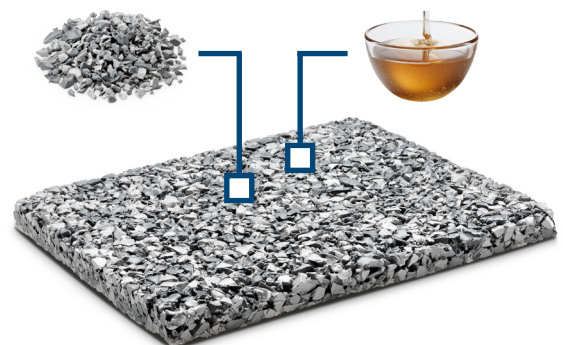

Melos Stone

EPDM Granules 90 Shore A,
2.0 - 10.0 mm*

Adhesive

Polyurethane Binder

* different grain sizes on request.
