

for artificial grass

If you have synthetic grass and a dog, odour caused by dog urine can have a serious impact on the enjoyment of your back yard.

PetFill™ substantially neutralises and reduces unpleasant odours from dog urine on artificial lawn. It's an organic mineral blend that absorbs & breaks down the ammonia from urine, making it ideal for use as an infill product for synthetic lawn. This creates a healthier environment, not just for your pets, but for the whole family.

Due to PetFill's™ capacity to absorb and slowly release moisture, it will also keep your grass cooler on hot summer days.

PetFill™ is applied at the time of installation of your synthetic grass and doesn't need renewing. It's applied at a rate of 10kg/sqm in a standard 35mm pile height landscaping synthetic lawn.

PetFill™ is also a fantastic additive to kitty litter trays as it can significantly reduce the very unpleasant ammonia smell from your cat's litter tray.

PetFill™ is environmentally friendly, non-toxic and 100% Australian Made.
